## Cloud Nine - Gold

This package has been designed to accommodate functions where the client wants the very best in lighting, music and video presentation for their events and that would instantly provide the wow factor. The Gold package is very popular with clients whom hire in a Marquee company for their events whereby the function is held at a private property or a venue that is large enough to accommodate the Gold package. It is also very popular with corporate clients whom have large venues and audiences in typically large hotels, Guildhalls, sports halls etc.

It comprises two 6 mtr (19ft) goalpost systems and two 4 mtr (13ft) goalpost systems additional 2 off 2 mtr video screens upon which the lighting and video screens are winched up in the air and provide a spectacular overhead lighting display that becomes one of the largest video shows found in the UK.

Gold Package minimum dimensions:

12 mtrs 39½ ft - 16 mtrs 52½ ft (Width) x 2.5 mtrs 8¼ ft (Depth) x 2.5 mtrs 8¼ ft (Height)

This package includes the Laser shows, starcloths, intelligent lighting and populates the entire length of the goalpost systems with a vast array of different effects. This package also includes a 6 mtr frontal lighting show inclusive of a high quality sound system.

If the function has a large audience (500+) additional sound systems can be integrated to accommodate the extra sound needed with this many people. Additional costs are added to this and are adjudged on a case by case basis.

With this package Cloud Nine has the ability to display the client's images, photographs or video clips which enhance persay a wedding where the photographs of the daytime events can be shown to the evening guests. It can also show logo's etc on the video screens and plasma displays for corporate recognition prior or during the music presentation.

A typical marquee, rectangular in shape is 12 mtrs wide on the shortest sides and the Gold package provides a spectacular lighting, video and music show that spans the entire width of the marquee. The lighting and video screens are subsequently winched into a position to accommodate the apex of the marquee thus providing a significant covering of one end of the marquee which normally is attributed to where a dance floor would be laid.

Site visits to the client are conducted to ensure the exacting details and requirements are fully understood prior to the function and can accommodate an early setup if required so that a formal dinner or wedding breakfast persay is followed by a seamless transition to the entertainment starting. A site visit is essential to ensure safe access and egress from the function and also to discuss the power, music, timing requirements etc thus ensuring a memorable occasion.

The Gold package includes no additional costs up to 12:00AM, however additional charges per hour apply should the client require the function to go beyond this time. The venue must be fit for purpose and be capable of accommodating the time span of the extra length of time should it be required.
